GENERAL ALLEGATIONS

11. Myriad is a molecular diagnostic company that develops and uses proprietary technologies that permit doctors and patients to understand the genetic basis of human disease and the role that genes play in the onset, progression and treatment of disease. Myriad's technologies result in, and guide the development of, new molecular diagnostic products that assess an individual's risk for developing disease, identify a patient's likely response to drug

therapy, and assess a patient's risk of disease progression and recurrence.

12. For healthcare providers, Myriad offers an array of genetic tests, prognostic tests and personalized medicine tests to help healthcare providers assess a patient's increased cancer risk, disease aggressiveness and optimize efficacy of chemotherapy. Myriad's testing products provide healthcare providers with information to help make medical management decisions to reduce cancer risk and help make sure specific treatments are tailored for each individual patient.

13. For patients, Myriad offers tests that provide important clinical information to assist patients and their healthcare providers in assessing cancer risk so the patient can take preventative action to reduce the risk of disease and in making treatment decisions if the patient is diagnosed with cancer. Myriad improves patient care through the development of new products across multiple medical specialties.

14. In the early-to-mid 1990s, Plaintiffs discovered the genetic sequences of the BRCA1 and BRCA2 genes and mutations that increase a woman's risk of developing breast and ovarian cancer. Since that time, Myriad has invested over \$500 million to implement this discovery and create a molecular diagnostic test for hereditary breast and ovarian cancer related to the BRCA1 and BRCA2 genes. Likewise, Myriad has spent significant resources to create a molecular diagnostic test for hereditary colon cancer caused by mutations in the mutY homolog (MUTYH) gene. Plaintiffs' efforts have revolutionized patient care and provided medical diagnosis and treatment options never thought possible.

15. Defendant offers laboratory services, including clinical diagnostic and genomic services, including testing and analysis of BRCA1, BRCA2, and MUTYH genes.

16. On September 10, 2013, Defendant announced that it would "add BRCA1 and BRCA2 testing in future product releases." At the 2013 Annual Meeting of the Association for Molecular Pathology held in Phoenix, Arizona from November 12-16, 2013, Defendant announced that it would begin offering its BRCA1 and BRCA2 analysis as part of its cancer-

testing menu during the week of November 18, 2013. Defendant added BRCA1 and BRCA2 gene testing into the offered panel testing services promoted on its website on November 19, 2013. On information and belief, Defendant offers full gene sequencing and deletion/duplication analyses for the BRCA 1, BRCA 2, and MUTYH genes as part of multiple hereditary cancer panels that test cancer susceptibility using next-generation sequencing technology.
